GENERATOR FEATURES

- ❒ Two/Four pole, revolving field generator, directly connected to the engine shaft through a heavy-duty, flexible disc for permanent alignment.
- ❒ Generator meets temperature rise standards for class “F” insulation as defined by NEMA MG1-22.
- ❒ Stator windings are “trickle” varnished and rotor windings are “roll-dipped” for complete Class H impregnation.
- ❒ Unit tested for motorstarting ability by measuring instantaneous voltage dip with a waveform data acquisition system.
- ❒ All models utilize an advanced wire harness design for reliable interconnection within the circuitry.
- ❒ Magnetic circuit, including amortisseur windings, tooth and skewed stator design, provides a minimal level of waveform distortion and an electromagnetic interference level which meets accepted requirements for standard AM radio, TV, and marine radio telephone applications.
- ❒ Voltage waveform deviation, total harmonic content of the AC waveform, and balanced T.I.F. (Telephone Influence Factor) have been evaluated to acceptable standards in accordance with NEMA MG1-22.
- ❒ Alternator is of drip-proof guarded construction.
- ❒ Fully life-tested protective systems, including “field circuit and thermal overload protection” and standard mainline circuit breakers capable of handling full output capacity.
- ❒ System torsional acceptability confirmed during prototype testing.
